

# Chaos Testing and Testing

Cheat sheets, Practice Exams and Flash cards 🖱️ [www.examprompro.co/kcna](http://www.examprompro.co/kcna)

## What is Testing?

Asserting the expectation of the input and outputs of functions.

```
require "test/unit/assertions"
include Test::Unit::Assertions

hello = 'world'

assert_equal 'world', hello, "hello function should return 'world'"
```

## What is Chaos Testing?

Building a system to withstand and tolerant any kind of failure by **purposely introducing random failures** in a **production system**.

# Helm Chart Directory Structure

Cheat sheets, Practice Exams and Flash cards 🖱️ [www.examprompro.co/kcna](http://www.examprompro.co/kcna)

A helm chart is a collection files within a **directory**

```
wordpress/  
  Chart.yaml           # A YAML file containing information about the chart  
  LICENSE               # OPTIONAL: A plain text file containing the license for the chart  
  README.md            # OPTIONAL: A human-readable README file  
  values.yaml          # The default configuration values for this chart  
  values.schema.json    # OPTIONAL: A JSON Schema for imposing a structure on the values.yaml file  
  charts/               # A directory containing any charts upon which this chart depends.  
  crds/                 # Custom Resource Definitions  
  templates/            # A directory of templates that, when combined with values  
                        # will generate valid Kubernetes manifest files.  
  templates/NOTES.txt   # OPTIONAL: A plain text file containing short usage notes
```

Helm reserves use of the charts/, crds/, and templates/ directories, and of the listed file names. Other files will be left as they are.

# Helm Chart File Structure

Cheat sheets, Practice Exams and Flash cards 🖱️ [www.examprompro.co/kcna](http://www.examprompro.co/kcna)

The Helm Chart describes the contents of the package such as the type of chart, dependencies

```
annotations:
  category: CMS
apiVersion: v2
appVersion: 5.8.3
dependencies:
  - condition: mariadb.enabled
    name: mariadb
    repository: https://charts.bitnami.com/bitnami
    version: 9.x.x
  - condition: memcached.enabled
    name: memcached
    repository: https://charts.bitnami.com/bitnami
    version: 5.x.x
  - name: common
    repository: https://charts.bitnami.com/bitnami
    tags:
      - bitnami-common
    version: 1.x.x
description: Web publishing platform for building blogs and websites.
engine: gotpl

```

# Helm Packaging and Installing

Cheat sheets, Practice Exams and Flash cards 🖱️ [www.examprompro.co/kcna](http://www.examprompro.co/kcna)

To package a chart directory in a versioned chart archive the “helm package” command is used.

```
helm package --sign ./mychart --key mykey --keyring ~/.gnupg/secring.gpg
```

Versioned chart archives are used by Helm package repositories

**Artifact Hub** is where we can find published Helm charts

<https://artifacthub.io/>

```
helm repo add nicholaswilde https://nicholaswilde.github.io/helm-charts/  
helm repo update  
helm install postgres nicholaswilde/postgres
```

Installing a helm chart

# Kustomize

Cheat sheets, Practice Exams and Flash cards 🖱️ [www.examprompro.co/kcna](http://www.examprompro.co/kcna)

**Kustomize** provides more flexibility when writing Kubernetes configuration files by allowing you to overlay (override) to “patch” configurations.

*Kustomize is built into KubeCTL*

```
├── base
│   ├── kustomization.yaml
│   ├── deployment.yaml
│   └── service.yaml
└── patches
    ├── dev
    │   ├── kustomization.yaml
    │   ├── deployment.yaml
    │   └── namespace.yaml
    └── prod
        ├── kustomization.yaml
        ├── deployment.yaml
        └── namespace.yaml
```

**Kustomization** file defined what will be overwritten in the base components.

# What is Infrastructure as Code?

Cheat sheets, Practice Exams and Flash cards 📖 [www.exampopro.co/kcna](http://www.exampopro.co/kcna)

## The Problem with Manual Configuration

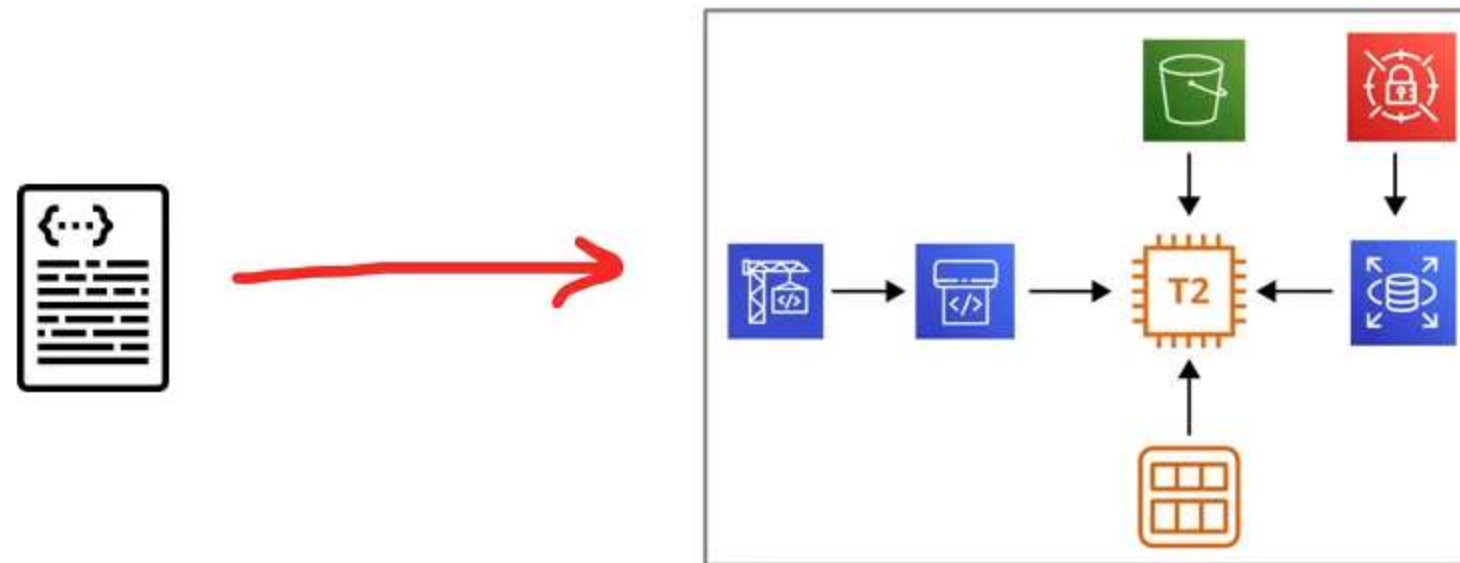

Manually configuring your cloud infrastructure allows you easily start using new service offerings to quickly prototype architectures however it comes with many downsides:

- Its easy to mis-configure a service though human error
- Its hard to manage the expected state of configuration for compliance
- Its hard to transfer configuration knowledge to other team members

## Infrastructure as Code (IaC)

You write a configuration script to **automate creating, updating or destroying** cloud infrastructure.

- IaC is a blueprint of your infrastructure.
- IaC allows you to easily **share, version or inventory** your cloud infrastructure.

# Popular Infrastructure as Code tools (IaC)

Cheat sheets, Practice Exams and Flash cards 🖱️ [www.examprompro.co/kcna](https://www.examprompro.co/kcna)

## Declarative

- What you see is what you get. **Explicit**
- More verbose, but zero chance of mis-configuration
- Uses scripting languages eg. JSON, YAML, XML

### ARM Templates

Supports only Azure

### Azure Blueprints

Supports only Azure  
Manages relationship between services

### CloudFormation

Only for AWS

### Cloud Deployment Manager

Supports on Google Cloud

### Terraform

Supports many cloud service providers (CSPs) and cloud services.

## Imperative

- You say what you want, and the rest is filled in. **Implicit**
- Less verbose, you could end up with misconfiguration
- Does more than Declarative
- Uses programming languages eg. Python, Ruby, JavaScript

### AWS Cloud Development Kit (CDK)

Supports only AWS  
Many built-in templates for opinionated best practices

### Pulumi

Supports AWS, Azure, GCP, K8

# IaC for Kubernetes

Cheat sheets, Practice Exams and Flash cards 🖱️ [www.examprompro.co/kcna](http://www.examprompro.co/kcna)

## Managing Infrastructure of the Cluster

**Terraform (or any IaC)** tool can be used to provision the cluster and managed services to be used alongside the cluster eg. Manage Database.

Terraform can technically manage cluster components via their Manifest module  
So you can \*benefit from the state management provided by Terraform.  
*Kubernetes already manages state with the Controller Manager and etcd*

## Managing Infrastructure in the Cluster

For managing (application) infrastructure within the cluster eg. Pods, Services, Ingres  
It is recommended to package as Helm charts and use that in your CI/CD.

# What is GitOps?

Cheat sheets, Practice Exams and Flash cards 🖱️ [www.examprompro.co/kcna](http://www.examprompro.co/kcna)

**GitOps** is when you take Infrastructure as Code (IaC) and you use a git repository to **introduce a formal process to review and accept changes to infrastructure code**, once that code is accepted, it automatically triggers a deploy

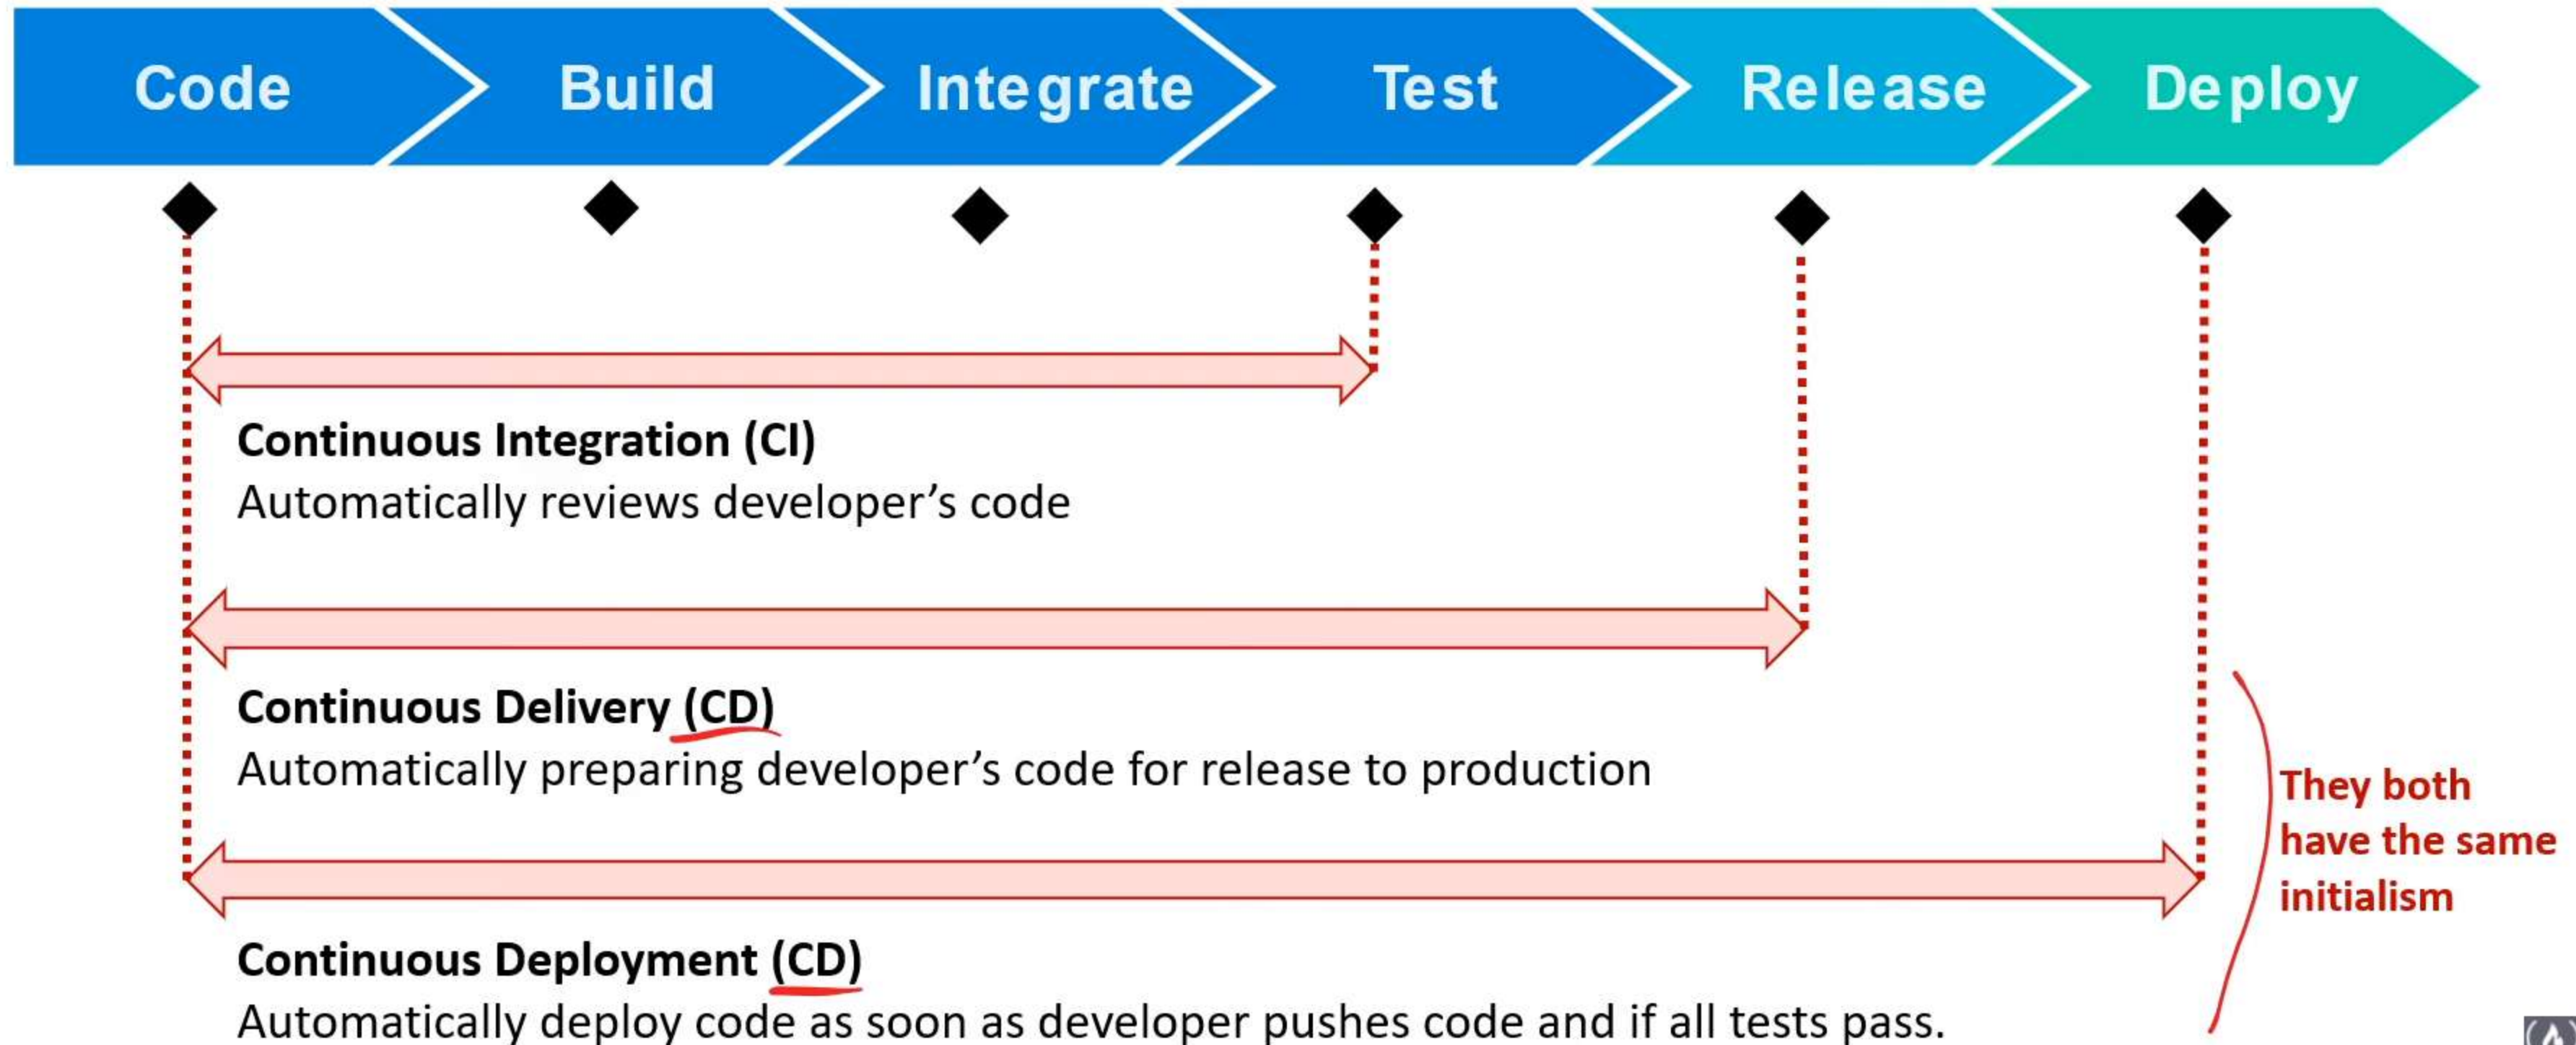

# CI/CD Models

Cheat sheets, Practice Exams and Flash cards 🖱️ [www.exampopro.co/kcna](http://www.exampopro.co/kcna)

**Production (prod)** is the live server where real paying users are using the platform

**Staging** is a private server developers do a final manual tests as a customer (QA) before deploying to prod

# Argo vs Flux

Cheat sheets, Practice Exams and Flash cards 🖱️ [www.examprompro.co/kcna](http://www.examprompro.co/kcna)

CNCF have two CI/CD projects that serve the same purpose but take a different approach.

- Originally developed by Weaveworks
- CLI-first approach
- Experimental Web UI as a plugin
- Supports Role-based access controls (RBAC)
- Supports multitenancy (Flux 2)
- Supports Helm and Kustomization
- Automation of Container Updates

- Both a CLI and Web UI
- Supports Role-based access controls (RBAC)
- Supports Single Sign On (SSO)
- Supports multitenancy
- Helm, Kustomization, ksonnet and jsonnet
- Manual commit and sync to update containers

Generally Flux is simpler in design and CLI focused

# Jenkins and Jenkins X and CloudBees

Cheat sheets, Practice Exams and Flash cards 🖱️ [www.examprompro.co/kcna](http://www.examprompro.co/kcna)

Jenkins is an open-source popular and mature CI/CD tool **for any kind of workload.** Jenkins can be used to deploy applications on to Kubernetes. Jenkins is written in Java, and have many plugins for any use case.

Jenkins X is an open-source CI/CD tool for modern cloud applications on Kubernetes. Compared to Jenkins its suppose to be much easier to use.

Jenkins X may replace or merge with Jenkins one day to only have a single CI/CD tool for all use cases.

**CloudBees** is the commercial distribution of Jenkins and Jenkins X for large and compliance first organizations CloudBees acquired InfraDNA, InfraDNA organization created Jenkins.

# CircleCI

Cheat sheets, Practice Exams and Flash cards 🖱️ [www.exampopro.co/kcna](http://www.exampopro.co/kcna)

CircleCI is a propriety fully managed CI/CD service to make deployments easy and seamless  
CircleCI can support deploying applications to Kubernetes
